

Monitoring

Truck Driver Display TDD-S

Displays tank content data for the tank truck driver. The integrated infrared sensor reacts to a simple hand movement and activates the Truck Driver Display – even through secured window pans of the filling station shop.

The Truck Driver Display is mounted behind a window pane so that it can be read from the outside. It is attached with Velcro strips. The TDD-S is activated and the illumination is switched on via a motion sensor, which even works through thick, metalised shop windows. The tank content data is automatically transmitted by the Mineo 2 Controller.

An outdoor version with IP65 protection class is also available as an option. This allows tank truck drivers or even the filling station manager to read out all relevant data – even when the station is closed. Fuel delivery is therefore also possible at night without any problems.

Typical Applications

- ✓ Filling stations
- ✓ Depots
- ✓ Process technology

Your Benefits

- ✓ Tank content data can be read from outside – at any time
- ✓ Mounted behind the shop window, protected against vandalism
- ✓ Operation via infrared sensor
- ✓ Outdoor version IP65

Technical Data

Dimensions	W 190 mm x H 135 mm x D 45 mm
Weight	0,5 kg
Temperature range	Standard version 0° C to 50° C Outdoor version -20° C to 60° C
Protection class	IP20, IP65 Outdoor version
Display / Indication	5 inch display (4 x 20 characters)
Mounting	Industry Velcro mounting
Connection	For connection to the following devices: - Mineo and Mineo 2 Controllers - Maxam Controller (compatible with previous edition 5000.90110600 TDD)
Power supply	For Mineo Controller internal via data cable For other controllers external 12 V DC (power supply 5000.90460001)
Interfaces	1x serial interface configurable as RS 232 or RS485
Display data	Predefined selection: - Volume, max. volume, ullage, water - Volume, ullage, water, temperature - Volume, level, ullage, water - Volume, volume TC, water, temperature

Variations

- **Indoor Version**
